

Dear Mr. Snow,

AUG 26 1999

0690-5

I believe the CALFED plan falls short of its potential to restore our dying estuary. Please ensure that:

- Water conservation comes before more dams.
- Enough water will flow through the Bay and Delta to restore fish populations and ecosystems.
- The pollution prevention program will really crackdown on contaminants.
- Environmental justice concerns are addressed.

I want to be able to enjoy the beautiful Bay, drink healthy water, and know that valuable ecosystems are thriving. Let's make sure this CALFED plan is one our children will thank us for.

Sincerely,

*Ken Dawdy*
